Roper Corporation  
Mr. Wendell Provost  
2207 West Station Street  
Kankakee, Illinois 60901

Dear Mr. Provost;

My letter of October 31, 1983 did not go into detail of the work update covering the prior two (2) weeks. Hopefully, this will clarify some questions that stem from this two week span.

October 16 and 17 was spent picking up all debris and removing metal tote containers from area along the north fence line. This area was scraped and leveled. I took six samples of soil in this area and tested them for pH. Samples were taken at 4 inch depth and at random distances. One small area was a little on the low side at 5.9 pH but the rest of the area was in the normal or neutral range. We talked about either dressing the area with limestone or grass seeding. Dressing with stone was decided and stone was hauled in on the 27th and 28th of October. More stone was needed and on ~~OCTOBER~~ November 1, 1983 we finished up with 4 more loads to complete all areas of work. A total of 8 loads were used.

The Lab Chemicals were packaged on October 24, 1983. Total of 4 - 55 gallon drums ~~were~~ needed to properly package chemical according to regulations. These drums will be permitted and sent to Alabama for disposal.

If any further information is needed, please give me a call.  
Thank you.

Very Truly Yours,

Howard Kinneman
